DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to a method for extended storage of glutathione, classified in class 62, subclass 45.1 for example.
- II. Claim 9, drawn to a method for extended storage of glutathione including reducing the temperature of the glutathione solution, classified in class 514, subclass 2 for example.
- III. Claim 10, drawn to a method for treating a patient with Parkinson's disease by administration of glutathione, classified in class 424, subclass 70.1 for example.
- IV. Claim 11, drawn to a method for treating a patient with emphysema with reduced glutathione, classified in class 424, subclass 184.1 for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are independent since they are not disclosed as capable of use together, they have different modes of operation, they have different functions, and/or they have different effects. One would not have to practice the various methods at the same time to practice just one method alone.

The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of one group would not necessarily anticipate or even make obvious another group. Because these inventions are distinct for the reasons given above and the search required for each Group is not required for the others, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
